U·VALVE, FLOW VALVE

Non contractual picture

U·valve combines in a compact unit a high accuracy pulse meter, a solenoid valve and a large and cleanable fluid screen filter with the electronics required to control the meter and valve operation and to communicate with other system components. Reduces installation time and eliminates the risk of leak when using separate components. It has a large, high visibility LED display showing the U·valve number assigned in the system, four colored LED lights that show the U·valve operation for diagnosis and two buttons for system configuration. U·valve supports Can-bus cable communication that transmits data and the electric power required to open the solenoid valve. It also supports Bluetooth® communications for connecting with a U·vision or a U·vision+ fluid handle with display. Requires 24 V DC supplied by a U·dat or a U·power module. U·valve wired connections use fast connection in/out Can-bus terminals.

- Remember, use Uvalve by NEXU to save time, fluids and money.
