

FEATURES

- Co2 in radiator leak test kit checks for head & gasket leaks
- Spots and locates combustion leaks quickly in cracked or warped heads, a leaky gasket or a cracked block.
- The test is done by inserting the leak-check unit into the radiator filler opening, and doing the test with the engine idling.
- The blue test liquid will turn yellow in 60 seconds if there is a combustion leak, no matter how small.
- For pinpointing which cylinder is leaking disconnect one spark plug at a time and retest.
