

## ***FEATURES***

- This kit has all you need to detect leaks in you car's cooling system external
- Leaks that may have been caused by blown gasket heads, cracked head or block.
- Can test automotive pressurized cooling systems up to 35psi (30psi recommended).
- Pump capacity has large volume that reduces the number of strokes required to pressurize cooling systems.
- Quick assembly and breakdown with self-locking quick-disconnect components.
- Relief valve is thumb-operated for convenient pressure release.
- Can use on most domestic & import vehicles.
- Includes: 8 radiator cap adapters and convenient carry case.
