

## ***FEATURES***

- A very effective yet simple design allows these oil filter strap wrenches to remove filters up approx 150mm in diameter in tight confines.
- They are operated by attaching a 1/2" ratchet or bar, a suitable spanner on the square shank of the tool or a bar through the manufactured hole in the shank.
- The more turning force applied to the tool the more grip on the filter.
- Invaluable where access to a filter is directly only from the end and not from the side which is what is needed with a conventional tool.
- Suitable For Filters Up To 150mm Diameter.
- 50mm Wide Nylon Webbing
- Steel Square Shank
- 1/2" Square Drive Ratchet Or Bar
- Spanner
- Bar Or Screwdriver
